1. Introduction and Plan of Approach

1.1 EXECUTIVE SUMMARY

The Creator Brand Collaboration System is a platform designed to seamlessly connect digital content Creators with corporate Brands. Identifying the right marketing talent and managing the deal lifecycle is often fragmented. This system provides a centralized hub where Brands can discover Creators through an intelligent recommendation engine, and Creators can manage their portfolios, evaluate proposals, and communicate securely.

1.2 CORE SYSTEM CAPABILITIES

- **Profile & Portfolio Management:** Users can securely register and establish detailed profiles. Creators upload portfolio media, while a backend Analytics Engine calculates metrics like Engagement Rates and Consistency Scores.
- **Intelligent Discovery Feed:** A dynamic, swipe-based interface that allows users to explore profiles with ease. The feed is ranked by a Recommendation Engine that calculates match scores based on niche tags and historical metrics.
- **Deal Lifecycle Management:** A structured workflow that governs how proposals are initiated, sent, accepted, or declined. It utilizes strict state transitions (e.g., from "New" to "Active") trackable via a Deal Dashboard.
- **Secure Messaging System:** A controlled communication module tied to active deals. Chat threads unlock only upon mutual deal acceptance, keeping negotiations organized and preventing spam.

1.3 PRIMARY ACTORS

- **Creators:** Users who register to showcase their portfolios. They interact with the system to manage profiles, view peers in their discovery feed, and respond to incoming deal requests.
- **Brands:** Business entities seeking marketing talent. Brands utilize the system's recommendation algorithms to discover highly rated Creators and initiate the "Send Deal" workflow.

1.4 BUSINESS OBJECTIVES

The following is a list of business objectives:

Objective 1: Login and Registration:

Users should be able to make accounts and log in to the platform safely. Users must be able to sign up as either a Creator or a Brand by giving the right information. Authentication makes sure that only people who are allowed to use the system can access its features.

Objective 2: Profile Setup:

Users should be able to make and change their profile information in the system. Brands can set campaign preferences and company details, while creators can upload portfolio content, niche tags, and a personal bio.

Objective 3: Creator's Activities:

The system should let Creators look through niche-based discovery feeds, see other creators who are similar to them, manage their profiles, and respond to requests for collaboration deals.

Objective 4: Brand's Activities:

Brands should be able to find creators through a ranked feed, use filters, make a short list of creators, and start collaboration deals.

Objective 5: Recommendation Engine:

Based on niche compatibility, engagement analytics, and past data, the system will give Brands a list of ranked creator recommendations.

Objective 6: Portfolio Analytics Engine:

The system will look at creator portfolio data and come up with metrics like engagement score, consistency score, and base creator score.

Objective 7: Send Deal:

Brands should be able to make and send collaboration proposals to Creators through the system. These proposals should include information about the campaign, the deliverables, and the deadlines.

Objective 8: Deal Lifecycle:

The system should be able to handle changes in deal status, such as new, accepted, active, declined, expired, completed, and terminated.

Objective 9: Messaging Interaction:

Brands and Creators will only be able to send secure messages to each other after the deal has been accepted.

Objective 10: Dashboard and History:

The system should have dashboards that show active deals, pending proposals, finished collaborations, and past deal records.

1.5 SYSTEM OBJECTIVES

Objective 1: The system shall be developed as a native Android-based mobile application to provide a responsive, mobile-friendly interface for real-time interaction between Creators and Brands.

Objective 2: The system will implement secure user authentication and authorization protocols to ensure that only registered and verified users can access the platform's core features.

Objective 3: The system will utilize a **SQLite database** for the persistent storage of user profiles, portfolio metadata, legal verification documents, deal records, and messaging histories.

Objective 4: The system will integrate an **AI-enhanced recommendation engine** to rank Creators based on niche tags, engagement metrics, and Brand-specific campaign preferences.

Objective 5: The system will include a **Portfolio Analytics Engine** that utilizes the **YouTube Data API** to calculate objective performance metrics, such as Engagement and Consistency scores.

Objective 6: The system will manage the complete **Deal Lifecycle**, utilizing a strict state-transition model to track collaborations from the "New Proposal" stage through to "Completion" or "Termination."

Objective 7: The system will facilitate a **secure messaging module** that permits the exchange of text and file attachments between Brands and Creators once a deal state is validated as "Active."

Objective 8: The system will provide dynamic **User Dashboards** that query the local database to display the real-time status of active deals, pending proposals, and historical collaboration data.

1.6 COMPONENTS COVERED

This Test Plan covers the following components:

- Login and Registration
- Profile Setup
- Creator's Activities
- Brand's Activities
- Recommendation Engine
- Portfolio Analytics Engine
- Send Deal
- Deal Lifecycle
- Messaging Interaction
- Deal Dashboard and History

1.7 ASSUMPTIONS / ANOMALIES

This section outlines the constraints and environmental conditions under which the Aura system is expected to operate for the current project scope.

Algorithmic Scope: The Recommendation Engine utilizes a simplified heuristic logic (Weighted Linear Combination) for the prototype. It does not currently incorporate deep learning or complex collaborative filtering.

Concurrency & Scalability: The system is designed as a Proof of Concept (PoC) and is not optimized for high-volume concurrent traffic or stress-tested for massive datasets beyond the scope of the Team 14 testing environment.

Session Management: The application assumes a strict single-user session per device. Simultaneous logins across multiple hardware units using the same credentials may result in undefined behavior or local database conflicts.

Data Persistence & Sync: For the prototype phase, the SQLite database is localized to the physical device. The system does not support cloud-based cross-device synchronization; data generated on "Device A" will not be visible on "Device B" without manual database migration.

Network Dependencies: While the database is local, the system assumes stable and continuous network connectivity for all YouTube Data API calls, secure messaging transmission, and initial profile verification.

Third-Party API Limits: Performance metrics are subject to the quota limits and latency of the YouTube Data API. Any service interruptions from Google side are considered outside the system's internal failure parameters.

Time-Sensitive Logic: Automatic state transitions (e.g., a deal moving to "Expired" after 7 days) are dependent on the system clock of the host device

2. Test Cases: “Login and Registration”

Project Name: Aura

Test Case Name: Login and Registration

Test Case Id: CSE3310/Spring 2026/Team14/Login-and-Registration

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Type in a new email address that isn't already in the system on the landing page and click Continue.	The system checks the email format, searches the database, finds that the email is not registered, and sends the user to the New User Registration flow.	
TC2	Enter an invalid email format, like userdomain.com or user@, on the landing page and click Continue.	The system won't accept the submission and shows an error message saying that the email format is wrong. The user can't go on until they enter an email that is formatted correctly.	
TC3	To finish registering as a new user, you need to use a new email address, a valid password that is at least 8 characters long and has at least one uppercase letter and one number, and valid personal information. You also need to answer a security question and choose either Creator or Brand.	The account is successfully created, marked as incomplete, duplicate registrations are stopped, the chosen role is saved, and the user is sent straight to Profile Setup.	
TC4	Try to register a new user with an email address that is already in the system.	The system stops registration and shows an error message saying that the account or email already exists. There is no duplicate account made.	

TC5	Try to register as a new user with a password that doesn't follow the rules, like one that doesn't have an uppercase letter, a number, or is less than 8 characters long.	The system won't let the user continue until they enter a valid password. It tells them why the password is invalid.	
TC6	If you are already registered, type in your email address and password, and then click Submit.	The system checks who the user is, logs the date and time of the login, reads the user's role, and sends the user to the right place: Brand → Video Discovery Feed or Creator → Personal Dashboard.	
TC7	If you are already registered, enter the right email address but the wrong password three times.	The system won't let you in if you keep trying. The system suggests using the "Forgot Password" feature after the third failed attempt.	
TC8	If you have a valid registered email and the right answer to the security question, you can use "Forgot Password."	The system checks the user's identity, resets the password, makes a temporary password, sends it to the registered email address, and suggests that the user change it the next time they log in.	
TC9	Use "Forgot Password" three times with either the wrong email address or the wrong security answer.	The system won't let you reset. The forgot-password feature is locked after the third failed try.	

3. Test Cases: “Profile Setup”

Project Name: Aura

Test Case Name: Profile Setup

Test Case Id: CSE3310/Spring2026/Team14/Profile-setup

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	After creating an account, successfully register a new user and look at the next screen.	The system automatically sends the user to Profile Setup before letting them access the rest of the application because the new account is marked as Incomplete.	
TC2	Log in as a user who has already signed up but whose account is still incomplete.	After logging in, the system stops the user and sends them to Profile Setup instead of the usual role-based landing screen.	
TC3	Leave the Motto/Headline field blank in the common profile information step and click Next.	Because Motto/Headline is required, the system stops progress to role-specific setup and shows a validation error.	
TC4	In the common profile information step, type in a valid Motto/Headline. You can also add a profile picture, bio, and YouTube link if you want. Then click Next.	The common profile information is saved and shown on the public profile. The user is then sent to the right setup screen for their account role.	
TC5	As a Creator, you need to finish setting up your account with at least one Niche Tag, a valid Location, and at least one video upload before you can press Submit.	The system saves the creator's niche tags and portfolio, changes the account status from "Incomplete" to "Complete," and sends the creator to the Personal Dashboard.	
TC6	As a Creator, try to send in creator-specific setup	The system won't let you submit and shows validation errors for	

	without choosing a Niche Tag or uploading at least one video.	the required creator setup fields that are missing. The account is still not complete.	
TC7	As a Brand, set up your brand completely with at least one Industry Tag and, if you want, add one or more Campaign entries. Then click Submit.	The system saves the Industry Tags and any campaign information, changes the account status to Complete, and sends the Brand to the Discovery Feed.	
TC8	As a brand, try to send in a brand-specific setup without choosing an Industry Tag.	Because at least one Industry Tag is needed, the system won't let you submit and shows a validation error. The account is still not complete.	
TC9	When you set up your profile, type in some real information, click Save & Exit, log out, and then log back in.	The system keeps track of progress between sessions and picks up Profile Setup where it left off. The user still can't get to the main app until all the required fields are filled out.	
TC10	Try to go to a different part of the app besides logging out, even though the profile is still not complete.	The system stops the user from going to other parts of the application and keeps them in the Profile Setup flow until all required information is entered.	

4. Test Cases: “Creator’s Activity”

Project Name: Aura

Test Case Name: Creator Activities

Test Case Id: CSE3310/Spring 2026/Team14/Creator-Activities

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Log in as a Creator successfully.	The system displays a vertically scrollable feed of similar creators and their content.	
TC2	Vertically scroll through the creator feed.	The system loads and displays additional creator content while maintaining smooth vertical scrolling.	
TC3	On a video feed, swipe horizontally on a creator's video.	Horizontal swiping reveals up to 2 additional videos from the same creator. Swiping back returns to the original video. The experience stays within the feed without navigating away.	
TC4	On a video feed, tap on a creator's profile name/icon from the feed to view their full profile	The creator's full profile page opens showing their bio, all portfolio videos, niche tags, and engagement/consistency scores.	
TC5	Press Exit Screen while browsing the feed.	The system closes the current feed/profile/content screen and returns the creator to the previous valid screen.	
TC6	Log in as a Creator and press their Profile icon or swipe right on the screen.	The system displays the creator’s current profile information, including bio, personal info, and saved profile settings.	
TC7	From the profile screen, press Edit Profile	The system opens editable fields for creator profile information, with options to upload or remove portfolio videos.	

TC8	Enter invalid data into a profile field during edit, such as numbers/special characters or exceeds maximum length or enters just empty space and press Save button	The system should not save the profile and should display an error message for the invalid or empty fields.	
TC9	Attempt to upload a portfolio video that exceeds the allowed file size or is in unsupported file format.	The system should reject the upload and display a proper message explaining that the video is too large or format is unsupported.	
TC10	Edit the creator bio or personal information with valid data and press Save button	The system saves the updated information successfully and reflects the changes on the profile view.	
TC11	Open Edit Profile, modify fields, then press exit button or closes app without saving.	The system exits the screen and unsaved changes are not reflected in the profile.	
TC12	Attempt to access creator profile management without being logged in.	The system prevents access and redirects the user to login or shows an authorization error.	
TC13	Log in as a Creator and open View Deal Requests.	The system displays a structured list of incoming deal requests or display 'No incoming deals' if none	
TC14	Click on any on incoming deal.	The system shows the complete proposal details for the selected deal.	
TC15	Press Accept on a pending incoming deal.	The system updates the deal status to accepted/active per workflow and enables messaging access for that deal.	
TC16	Press Decline on a pending incoming deal.	The system updates the deal status to declined/inactive and stores the deal in deal history.	
TC17	Log in as a Creator and open Current Deals.	The system displays a list of all current/active deals associated with the creator.	

TC18	From the current deals area, press View Previous Deals.	The system displays a list of previous deals, such as completed, declined, or expired deals.	
TC19	Clicks on any deal (current or previous one)	The system shows the complete proposal details for the selected deal.	
TC20	Clicks on message icon on any deal (current or previous).	The system opens the message thread linked to that active deal and displays stored conversations.	
TC21	Open View Current Deals when the creator has no active deals or opens View previous Deals when there are no previous deals.	The system displays an empty-state message indicating there are no current/previous deals.	
TC22	Try to access deal details or a message thread without being logged in	The system denies access and redirects the user to login.	

5. Test Cases: “Brand’s Activity”

Project Name: Aura

Test Case Name: Brand’s Activity

Test Case Id: CSE3310/Spring 2026/Team14/Brand’s-Activity

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Log in as a Brand and navigate to the Discovery Feed tab	Feed displays full-screen creator videos in a vertical scroll layout, ranked by match score. Each video shows the creator's name and summary info overlaid on the video.	
TC2	Scroll vertically through the Discovery Feed	Each vertical scroll loads the next creator's video seamlessly. Videos autoplay as they come into view. The feed supports continuous scrolling through multiple creators.	
TC3	Swipe horizontally on a creator's video in the feed	Horizontal swiping reveals up to 2 additional videos from the same creator. Swiping back returns to the original video. The experience stays within the feed without navigating away.	
TC4	Tap on a creator's profile name/icon from the feed to view their full profile	The creator's full profile page opens showing their bio, all portfolio videos, niche tags, and engagement/consistency scores.	
TC5	From the feed, press the "Send Deal" button on a creator's video	A pop-out dialog appears with a dropdown of the Brand's existing campaigns and a "+" button to create a new campaign.	
TC6	Open the filter options from the Discovery Feed and apply a single filter (e.g., content category = "Fitness")	The video feed refreshes to show only creators matching "Fitness." The active filter is visually indicated. The vertical scroll and horizontal swipe still	

		function normally on filtered results.	
TC7	Apply multiple simultaneous filters (e.g., category = "Tech" AND location = "USA")	Feed displays only creators matching all selected criteria. Results update dynamically. Vertical scroll and horizontal swipe continue working on the filtered set.	
TC8	Press "Reset Filters" after applying filters	All filters are cleared. The feed returns to the default ranked view of all creators.	
TC9	From the feed or a creator's profile, tap "Save Creator" to add them to the shortlist	The creator is saved to the Brand's shortlist with a visual confirmation. The shortlist is accessible and shows saved creators with options to view profile, send deal, or remove.	
TC10	Navigate between the Feed tab, Sent Deals page, and the Brand's own Profile Setup/Edit page	Navigation between all three pages works smoothly. The feed retains its scroll position when returning. Each page loads correctly without errors.	

6. Test Cases: “Recommendation Engine”

Project Name: Aura

Test Case Name: Recommendation Engine

Test Case Id: CSE3310/Spring 2026/Team14/Recommendation-Engine

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Access the feed for a specific niche (e.g., "Tech").	The system should display creators belonging only to that niche, ranked from highest score to lowest.	
TC2	Verify the "Frequency" weight by comparing two creators in the same niche.	The creator with the higher post frequency should appear higher in the feed than one with more likes but lower frequency.	
TC3	Update a creator's data so their new score surpasses the current #1 rank.	The feed should automatically re-order to place the new highest-scoring creator at the top.	
TC4	Filter the recommendation feed by a secondary metric (e.g., "Most Liked" instead of "Top Score").	The engine should override the default ranking to show the creator with the highest raw like count first.	
TC5	Test the "New Creator" placement (0 score or no data).	New creators should be placed at the bottom of the niche feed until the Portfolio Analytics calculates their initial score.	

7. Test Cases: "Portfolio Analytics"

Project Name: Aura

Test Case Name: Portfolio Analytics

Test Case Id: CSE3310/Spring 2026/Team 14/Portfolio-Analytics

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Sync a new YouTube Creator profile to the platform.	The system should successfully pull Likes, Views, and Frequency data via API.	
TC2	Compare two creators: Creator A (High frequency) vs Creator B (High likes).	The system should assign a higher score to Creator A if frequency is weighted more heavily.	
TC3	Change a creator's niche and refresh the analytics.	The creator should be ranked against a new set of peers in the Recommendation Engine.	
TC4	View the "Score Breakdown" for a specific creator.	The system should show how much each metric (Likes vs. Frequency) contributed to the final score.	
TC5	Simulate a "Viral Video" (sudden spike in views).	The Portfolio Analytics should update the score in real-time and potentially move the creator up in the Feed.	

8. Test Cases: "Send Deals"

Project Name: Aura

Test Case Name: Send Deals

Test Case Id: CSE3310/Spring 2026/Team14/Send-Deals

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	From the Send Deal pop-out, verify the dropdown lists all campaigns created during Profile Setup	The dropdown displays all campaigns the Brand has previously created. Each entry shows the Campaign Name. A "+" button is visible to create a new campaign.	
TC2	Select an existing campaign from the dropdown	The selected campaign's details (title, brief/description) are loaded from the Brand's profile data. The Brand can review the details and the "Send Deal" button becomes active.	
TC3	Tap the "+" button to create a new campaign from the Send Deal pop-out	The system allows the Brand to enter a new Campaign Name and Campaign Brief/Description. Once saved, the new campaign appears in the dropdown and can be selected to send.	
TC4	Open the Send Deal pop-out when the Brand has no campaigns set up	The dropdown is empty. The system prompts the Brand to create a campaign using the "+" button. The "Send Deal" button is disabled until a campaign is selected.	
TC5	Select a campaign and press "Send Deal"	The proposal is submitted successfully. A confirmation message is displayed to the Brand. The pop-out closes and the Brand returns to the feed.	
TC6	Attempt to press "Send Deal" without selecting a	The system prevents submission and displays a validation	

	campaign from the dropdown	message indicating that a campaign must be selected before sending.	
TC7	Press "Cancel" or close the Send Deal pop-out without sending	The pop-out closes. No deal is created or sent. The Brand returns to the feed or profile with no changes.	
TC8	Send a deal to the same creator for two different campaigns	Both proposals are sent separately. Each deal is tied to its respective campaign and will appear as individual entries on dashboards.	
TC9	Send a deal, close the pop-out, then open "Send Deal" again for a different creator	The pop-out opens fresh with no pre-selected campaign from the previous send. The dropdown and "+" button function normally for the new creator.	

9. Test Cases: “Deal Lifecycle”

Project Name: Aura

Test Case Name: Deal Lifecycle

Test Case Id: CSE3310/Spring2026/Team14/Deal-Lifecycle

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	After a deal is sent, verify the Creator receives a notification	The Creator receives an in-app alert, push notification, or email informing them of the new collaboration proposal from the Brand.	
TC2	After a deal is sent, verify it appears on the Creator's dashboard under "New Deals"	The deal shows in the "New Deals" section with a Quick Deal Overview (campaign title, summary). "Accept" and "Decline" buttons are visible.	
TC3	After a deal is sent, verify it appears on the Brand's dashboard under "Sent Deals"	The proposal appears in the Brand's "Sent Deals" / "Pending" section showing creator name, campaign title, and status. A "Withdraw/Cancel" option is available.	
TC4	As a Creator, press "Accept" on a new deal	Deal status transitions to "Accepted." Messaging (DM) is unlocked for this deal between Brand and Creator.	
TC5	After accepting, send the first message in the deal's DM thread	Deal status transitions from "Accepted" to "Active." The deal appears in the Active Tab on both dashboards.	
TC6	As a Creator, press "Decline" on a new deal	Deal status transitions to "Declined." The deal moves to Deal History.	
TC7	As a Brand, press "Withdraw/Cancel" on a	The deal is removed from the Creator's "New Deals" section	

	pending deal before the Creator responds	and updated/removed from the Brand's dashboard.	
TC8	With an Active deal, Brand presses "Complete Deal" and Creator presses "Confirm Close"	Deal transitions to "Completed" only after both parties confirm (mutual close). Deal is archived to History. Both parties are prompted to rate and review each other.	
TC9	After a completed deal, both parties submit ratings and reviews	Reviews are published on each party's profile under a "Reviews" section. The system recalculates and updates the "Aura Score" for both Brand and Creator.	
TC10	With an Active deal, press "Terminate Deal" to cancel mid-project	Deal transitions to "Terminated." Deal moves to History with "Terminated" status. Messaging is locked for this deal.	

10. Test Cases: “Messaging Interaction”

Project Name: Aura

Test Case Name: Messaging Interaction

Test Case Id: CSE3310/Spring 2026/Team#14/Messaging-Interaction

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Open a chat thread for current or previous deal.	The system loads the complete chat history associated with that deal, including all previously shared messages and files.	
TC2	In a chat thread of active deals, user types a valid messages and press Send.	The system stores the message, marks it as Sent, and delivers it in real time with push notifications if enabled.	
TC3	User type no content and presses Send in an active chat thread.	The system prevents empty message submission and keeps the user in the chat thread.	
TC4	In an active chat thread, press Add Attachments button.	The system opens a file selection window allowing the user to choose files from their device.	
TC5	User selected a valid file from device (PDF, JPEG, PNG, MP3, MP4) and presses upload.	The system uploads the file successfully and prepare it for sending	
TC6	User selects a file exceeding maximum allowed size or exceed allowed number of attachments.	The system rejects the upload and display appropriate validation message.	
TC7	User attempts to upload an unsupported file format	The system rejects the file and informs the user that only supported formats such as PDF, MP3, MP4, JPEG, and PNG are allowed.	

TC8	After successful file upload, user press send button	The system sends the file successfully and stores it securely in database for later access in that deal.	
TC9	After successful file upload, user presses cancel or exists chat	The upload is discarded and no file is attached or stored.	
TC10	In a chat thread for a deal whose status is not Active, user attempt to send a message.	The system blocks the action and displays that messaging is disabled for inactive deals.	

11. Test Cases: “Deal Dashboard History”

Project Name: Aura

Test Case Name: Deal Dashboard History

Test Case Id: CSE3310/Spring 2026/Team#/Deal-Dashboard-History

Test Case No.	Test Case Description	Expected results	Outcome Pass, Fail, Other (comments)
TC1	Open the Dashboard and locate the "Active" section.	Displays all ongoing deals with the brand/creator name, deal title, and current status.	
TC2	Transition a deal from "Active" status to "Completed."	Deal is removed from the Active section and appears under the "Completed Deals" section.	
TC3	Select a deal from the "Completed" section.	System opens the detailed view showing final terms and the associated DM thread.	
TC4	Open the "Deal History" window.	Displays three distinct, separate sections: Rejected, Expired, and Canceled.	
TC5	Move a deal through multiple states (e.g., Active to Canceled).	The deal appears in exactly one correct section at a time without duplicates.	
TC6	Simulate a deal offer reaching 7 days without a response.	The system automatically moves the deal to the Expired section in History.	
TC7	Execute a "Cancel" action on a previously accepted deal.	The deal record is moved to the Canceled section within the Deal History window.	
TC8	Access the "Sent Deals" section as a Brand user.	Displays a comprehensive list of all deals initiated by the brand with their real-time status.	
TC9	Click on a deal within the "Sent Deals" list.	Displays full deal details including terms, pricing, and the interaction/DM history.	
TC10	Attempt to access the "Sent	Access is denied; the "Sent Deals"	

	Deals" view using a Creator profile.	view is hidden or restricted for Creator roles.	
--	--------------------------------------	---	--
